TEAM 2 – Sprint 7 Review Report

1. Functional Testing and User Story Refinement We reviewed and refined user stories related to software functionality. We conducted comprehensive unit and integration testing to ensure new features and localizations integrated smoothly and that all functions worked correctly following the code cleaning procedure.

2. Bug Resolution and Code Quality Assurance We addressed bugs and issues identified during the testing phase. We validated our code quality using SonarQube, ensuring that the statistical code report showed all grades as A, or at a minimum, B.

3. Non-Functional Testing We performed performance testing to assess the system's responsiveness under various loads. Additionally, we conducted a heuristic evaluation of the final project to assess usability.

4. Acceptance Testing We conducted the acceptance test to ensure the product is functional, usable, and aligned with the initial requirements defined by the Product Owner.

5. Technical Documentation and Updates We documented the required technical specifications and system architecture changes based on the test results. We also updated the project documentation to include relevant changes made during the sprint.

Team member	Task	Time spent (hrs)
Georgii Afanasev	User acceptance testing, updating user stories, refactoring	10h
Axel Nokireki	Cleaning code, bug fixes	10h
Vladimir Karpenko	Validate sonarqube quality metrics, heuristic evaluation	10h
Patrik Skogberg	Refactoring, unit tests, Cleaning up code	10h

Bets regards,

Vladimir Karpenko
